

Energy Technolabs Private Limited (ETL) is an IT Services and Solutions company founded in 2013. ETL has been dedicated towards providing software solutions which could provide easy tech support to business and individuals belonging to various sectors with the variety of services we cater to. We have served people from various sections of society with a variety of background and a whole new bunch of intentions and requirements with the products. ETL has never failed in delivering what we do best, make things easier and comfortable to manage. ETL has been working with prestigious brands and organisations as well as noble causes in the past and we believe that going ahead is the only way to make solutions work out in favour.

Our vision is to bridge the gap between requirement and a technological solution to the same. No matter what it is, we believe nothing is impossible and every problem comes with a solution in itself. We aim to create the scenario where man is using technology to make things easier rather than technology is using man to make money. We believe in the advancement of technology and increasing our role in the same through our work and initiatives as well as in-house R&D projects.

ETL uses the following technologies to create their products

In our quest to provide end to end IT solutions, we have had the pleasure to have create something which touched the lives of many at large. Along with our commercial and corporate projects, we have helped create SOS systems for Highway Police Maharashtra and Thane Traffic Police, both of which are bona fide work and have received tremendous responses from the masses.

We are also working on a number of in-house R&D projects which will revolutionize the way technology and internet is used. These projects are directly inspired from real world problems and aim at providing a permanent solution to the same. Once and for all.
